

FLOWMASTER

FLOATING DREDGING HOSE

FLOATING DREDGING HOSE

Floating Dredging Hose has been used on reclamation projects in different parts of Indonesia. It is designed for abrasive material transfer applications and is equipped with extra abrasion-resistant lining for longer life-time use for dredging sand and slurry.

Floating dredger hose is suitable for the most harsh sea conditions. It is equipped with PE foam body in order to adjust to the SG of the pumped material in order to stay afloat. It is also suitable for suction & delivery services.

It is available up to diameter of 26" and in maximum length of 11 meters & different pressure ratings.

Please contact our sales team for more information.
