FLOATING OIL HOSE

Floating oil hoses provide a means to safely transfer crude oil & liquid petroleum products from fixed offshore installations to shuttle tankers. The hose range includes submarine and floating type hoses, in configurations to suit various loading facilities and installations worldwide. It is equipped with high performance oil & weather resistant materials in order to ensure a long lifetime.

Floating oil hose is suitable for the most harsh sea conditions. It is equipped with a PE foam body in order to adjust to the pumped material in order to stay afloat. It is also for suction & delivery service.

It is available up to a diameter of 26" and maximum length of 11 meters & different pressure ratings.
